EDUCATION

The ICT University, Cameroon

Expected: May 2026

Bachelor of Engineering in Software Engineering (GPA: 3.17 / 4.0)

- Relevant Coursework: Introduction to Software Engineering, Java Programming, Data Structures and Algorithms (C++),
- Python Programming, Object Oriented Analysis, Design and Implementation.

WORK EXPERIENCE

Software Engineer

Cameroon, Yaoundé

July 2023– Present

- Architected a **SAAS**-based backend system using **Node.js**, **Express**, and an **event-driven architecture**, supporting mobile and web applications with scalable REST APIs.
- Reduced query response time by 25% by optimizing **MongoDB** databases and indexing frequently accessed data.
- Spearheaded the development of a **React-based** customer-facing dashboard, enhancing user engagement by 40%.
- Designed and implemented **CI/CD** pipelines using GitHub Actions, accelerating deployment cycles by 20%.

Full Stack Engineer

Remote

Match 2024 – Present

- Developed user-friendly interfaces using **Angular**, improving customer satisfaction scores by 18%.
- Implemented automated unit testing using Jest, increasing code coverage by 30% and reducing production bugs.
- Collaborated in Agile sprints with cross-functional teams to deliver features on time and improve workflows.

EXTRA CURRICULAR

Events Team

NGCODEX CLUB

Match 2023 – Present

- Attended and completed the Microsoft Learn Student Ambassador Workshop on **Git & GitHub**.
- Contributed in building a website at NGcodeX at ICT University, Cameroon.

PERSONAL PROJECTS

Project Management System - Protrack

Technologies: React.js, Next.js, PostgreSQL

- Designed a Project Management platform, users can set goals, achieving 50% of project organization.
- Built a secure authentication system using **JWT**, enhancing data privacy.
- Reduced manual project management by 20% with optimized backend, fast data response enhancing user experience.

Employee Management System

Technologies: Java, Angular, Docker, Spring Boot

- Build an Employee Management System where employers/HR manages and assign tasks to employees, facilitating employers/HR work and management by 40%.
- Built scalable backend with **Java**, **Spring Boot** with Secure Authentication using JWT, Cookie, improving user security by 30%

AI-Powered Resume Analyzer

Technologies: React, React Router, Puter.js

- Built an **AI** resume analyzer, candidate upload their resume and AI automatically evaluate and match job requirement improving resume by 25%.
- Designed a Modern user interface to ease user visualization and enhancing their utilization with the app.

Phonkers – Music Social Mobile App

Technologies: Flutter, Dart, Firebase

- Built a music-focused social mobile application where users can post, like, comment and receive real-time notifications on trending phonk content

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Java, TypeScript

Frameworks and Tools: React.js, Flutter, React Native, Next.js, Angular, Node.js, Express.js, Spring Boot, Docker, PostgreSQL, AWS, GitHub Actions

Concepts: Microservices Architecture, Event-driven Architecture RESTful APIs, CI/CD, AI, k8s, Agile Development

FANYI CHARLLSON | Junior Mobile Developer (React Native)

MOBILE DEVELOPMENT EXPERIENCE

- Built and integrated mobile-first applications using **React Native**, consuming **REST APIs** developed using **Express.js**
- Focused on clean UI design, smooth navigation, and efficient API communication to deliver responsive mobile user experiences.

SELECTED MOBILE AND AI PROJECTS

Technologies: React Native, Express.js, Event-Driven Architecture, Appwrite

WayFinder – Smart Route & Cost Estimation App

- Developed a mobile application that allows users to search routes, transportation estimation tailored to local routes in Cameroon, and receive optimized navigation suggestions.
- Built a scalable backend using Express.js with an event-driven architecture to handle route queries, cost calculation, and real-time responses

WhichEmail – AI-Powered Email Credentials Manager

- Built a mobile application that securely manages email credentials and configurations, leveraging AI to assist users in finding and locating where(which service was the email used instead of scrolling to find manually) which email was used.
